

## Creating a New User Account for Windows

In this article, we will explore the process of creating a new user account in the Windows operating system. User accounts are essential for managing access to a computer or network, providing security and personalized settings for each individual user. This guide will focus on the steps and commands required to create a new user account in the Windows environment.

### Examples:

#### 1. Creating a User Account Using the Command Prompt (CMD):

- Open the Command Prompt as an administrator.
- Type the following command and press Enter:

```
net user username password /add
```

- Replace "username" with the desired username for the new account and "password" with the desired password.
- The new user account will be created.

#### 2. Creating a User Account Using PowerShell:

- Open PowerShell as an administrator.
- Run the following command:

```
New-LocalUser -Name username -Password (ConvertTo-SecureString -String password -AsPlainText -Force)
```

- Replace "username" with the desired username for the new account and "password" with the desired password.
- The new user account will be created.

#### 3. Creating a User Account through the Control Panel:

- Open the Control Panel.
- Navigate to "User Accounts" or "User Accounts and Family Safety" (depending on the Windows version).
- Select "Add or remove user accounts" or "Manage another account".
- Click on "Create a new account".
- Enter the desired username and select the account type (administrator or standard user).
- Click on "Create Account" to create the new user account.
