

New List of Samsung Devices to be Updated to Android 6.0 in Windows Environment

In today's digital world, staying up to date with the latest software updates is crucial for both functionality and security. This article aims to provide Windows users with information on the new list of Samsung devices that will receive the Android 6.0 update. While the Android operating system is not compatible with the Windows environment, it is important for Windows users to be aware of the devices that will be updated to Android 6.0 in case they own or plan to purchase one of these devices. Additionally, this article will suggest alternative solutions or equivalents for Windows users who may be interested in similar functionalities.

Examples:

1. **Checking for Android 6.0 Update:** To check if your Samsung device is eligible for the Android 6.0 update, you can follow these steps:
 - Connect your Samsung device to your Windows computer using a USB cable.
 - Open the Samsung Smart Switch application on your Windows computer.
 - Click on the "Software Update" option in the Smart Switch interface.
 - The application will automatically check for any available updates for your device, including the Android 6.0 update.
2. **Alternative Solution:** While the Android 6.0 update is not applicable to the Windows environment, Windows users who desire similar functionalities can consider upgrading their Windows version to the latest release. Windows updates often bring new features and improvements, ensuring a smooth and secure operating system.
